**Dr. med. Andreas Oesch**

"Andreas Oesch is a vascular surgeon and runs a practice which is specialized in vein treatments in Bern. In 1984 he developed the vein hook no. I, the versions II and III were added later.

In 1992 the PIN-Stripper and his derivatives followed. With the company HEBUmedical a more fine version of the proven vein hook was developed, the no IV black as well as a PIN-Stripper variation. This enables the rinsing and anesthesia of the stripping channel."

Oesch black

Model Oesch haakje met de  
fijnste tip. Titanium coating.

**Pin-Stripper with rinse catheter**

With the introducing of the tumescent solution the stripping channel will be additionally anaesthetised and the coagula will be removed after the stripping.

In comparison with the usual Pin-Stripping the vein will be loosed from the instrument, what strongly minimizes the risk of an incomplete vein removal. With both methods you don't have to search the vein in the periphery, a suture of the lower stitch incision is not necessary.
